Week 1

Basics of Java Programming

Program 1

Write a Java program to display "Welcome to Java Programming" and your personal details.

```
class PersonalDetails
{
   public static void main(String args[])
   {
      System.out.println("Welcome to Java Programming");
      System.out.println("Name      : Rahul Kumar");
      System.out.println("Roll No   : BT24001");
      System.out.println("Branch    : Biotechnology");
      System.out.println("College   : ABC Institute of Technology");
   }
}
```

Program 2

Write a Java program to perform arithmetic operations (+, –, ×, ÷, %) using two numbers entered by the user.

```
import java.util.Scanner;

class ArithmeticOperations
{
   public static void main(String args[])
   {
      Scanner sc = new Scanner(System.in);

      int a, b;

      System.out.print("Enter first number: ");
      a = sc.nextInt();

      System.out.print("Enter second number: ");
      b = sc.nextInt();

      System.out.println("Addition = " + (a + b));
      System.out.println("Subtraction = " + (a - b));
      System.out.println("Multiplication = " + (a * b));
      System.out.println("Division = " + (a / b));
      System.out.println("Modulus = " + (a % b));

   }
}
```

Program 3

Write a Java program to find the largest among three numbers using if-else statements.

```
import java.util.Scanner;
```

```
class LargestNumber
{
   public static void main(String args[])
   {
      Scanner sc = new Scanner(System.in);

      int a, b, c;

      System.out.print("Enter first number: ");
      a = sc.nextInt();

      System.out.print("Enter second number: ");
      b = sc.nextInt();

      System.out.print("Enter third number: ");
      c = sc.nextInt();

      if(a >= b && a >= c)
      {
         System.out.println("Largest Number = " + a);
      }
      else if(b >= a && b >= c)
      {
         System.out.println("Largest Number = " + b);
      }
      else
      {
         System.out.println("Largest Number = " + c);
      }

      sc.close();
   }
}
```
